DETAILED ACTION

Allowable Subject Matter

Claims 3-5, 7-11, 13-14, 16-30 are allowed.

The following is an examiner's statement of reasons for allowance:

Referring to claim 27, the Boland reference (US Patent 6937723 B2) discloses communication device for connection to a telecommunication network for communicating with at least one distant interlocutor, having at least one loudspeaker and at least one microphone, the communication device comprising: echo processing means for attenuating coupling due to a signal emitted by at least one loudspeaker of at least one other communication device situated close to said communication device, said echo processing means including: (a) a receiver for receiving from said at least one other communication device information representative of a signal emitted by at least one loudspeaker of said at least one other communication device, the receiver being arranged to be responsive to the information via a digital connection distinct from said telecommunication network, all the communication devices being situated in the same premises and connected to one another through digital connections. The Boland taken alone or in combination with another reference does not disclose or fairly suggest **means for obtaining a piece of information representative of a distance separating a loudspeaker of one of said at least one other communication device from a microphone of said communication device**, where the piece of information is utilized in the (c) means for determining weighting coefficients to be applied to each of the broadcasted signals

Art Unit: 2614

reproduced by each of the loudspeakers of said at least one other communication device, taking account of said pieces of information representative of the distance, (d) an audio interface for: (i) weighting said of at least one broadcasted signal received by a microphone of said communication device, using said weighting coefficients and thus providing a signal S_{xa} corresponding to the adding of the signals broadcasted by the other telecommunication devices; (ii) adding said signal S_{xa} to an input signal received by one of said at least one loudspeaker of said communication device, thus providing for a reference signal of said one loudspeaker, (e) an echo control module modifying a signal Y_{In} picked-up by one of said at least one microphone of the communication device, as a function of said reference signal, and providing a modified signal Y_{2n} ; and (f) an interface for transferring the modified signal, with a view to a transmission thereof over the telecommunication network as recited in claim 27.

Claims 28-30 have been analyzed and allowed according to claim 27.

Claims 3-5, 23 depend on claim 27. Claims 7-11, 24 depend on claim 28.

Claims 13-14, 21 & 25 depend on claim 29. Claims 16-20, 22 & 26 depend on claim 30.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
